Cloud Access Control

The key to managing secure staff access without the associated infrastructure upheaval! When it comes to security, are you struggling with clunky old equipment or relying on manual processes to interface access information to other business systems?

And, if the worst happens and you have to evacuate a building, where do you get your roll call data from?

The Best of Both Worlds

HFX's Imperago™ Access Control provides the best of both worlds. A Solution-as-a-Service offering, all the software is stored in the cloud, with details of who is able to pass through which door stored locally on smart devices, so that doors still operate even if the network fails.

HFX also provide CloudMuster linked to your fire alarm for automatic mustering and eMusterPoint that enables staff to register their presence at a muster point outside the building.

One Simple Monthly Fee

Imperago Access Control provides hardware, software, and services all wrapped up in a simple monthly payment. No capital expenditure, no servers required, no time-consuming updates, just plug in, and go - and that includes the door controlling devices.

Included in the Package:

- Hardware based on the latest smart device technology.
- Software that runs locally and on the Cloud.
- Installation with no messy/disruptive wiring.
- Commissioning, to include set up and integration with other business applications.
- Support from engineers based throughout the UK.
- Paid for monthly, with no heavy up-front fees, you'll see a fast Return on Investment.
